

# Results from Element Matching

**Project name:** Campussamling Hesthagen

**Construction site located at:** 63.4154, 10.3995

## Summary of results

| Total score                | Score without reuse         | Savings | Substitutions |
|----------------------------|-----------------------------|---------|---------------|
| 8 333 kgCO <sub>2</sub> eq | 73 037 kgCO <sub>2</sub> eq | 88.59%  | 90.1%         |

The 'Greedy Algorithm Plural' algorithm yields the best results, substituting 901/1000 demand elements (90.1%). Using 'GWP' as the optimization metric, a total score of 8 333 kgCO<sub>2</sub>eq is achieved. For comparison, a score of 73 037 kgCO<sub>2</sub>eq would have been obtained by employing exclusively new materials. This results in a total saving of 88.59%. Note that impacts of transporting the materials to the construction site is not accounted for. Open the CSV-file "Campussamling Hesthagen Study Case 1\_substitutions.csv" to examine the substitutions.

## Constants used in calculations

| Constant          | Value  | Unit                 |
|-------------------|--------|----------------------|
| Density timber    | 491.0  | kg/m <sup>3</sup>    |
| Density steel     | 7850.0 | kg/m <sup>3</sup>    |
| GWP new timber    | 28.9   | kgCO <sub>2</sub> eq |
| GWP reused timber | 2.25   | kgCO <sub>2</sub> eq |
| GWP new steel     | 9263.0 | kgCO <sub>2</sub> eq |
| GWP reused steel  | 278.0  | kgCO <sub>2</sub> eq |

## Information about datasets

| Elements | Filename                  | Number of elements |
|----------|---------------------------|--------------------|
| Reused   | master_thesis_supply.xlsx | 1000               |
| Demand   | master_thesis_demand.xlsx | 1000               |

The files contains 1000 reuse elements and 1000 demand elements. The graphs below depicts some of the properties of the elements, including length, area, moment of inertia and the material distribution.

## Performance of algorithms

| Name                    | Total score                | Substitutions | Time    |
|-------------------------|----------------------------|---------------|---------|
| Greedy Algorithm Plural | 8 333 kgCO <sub>2</sub> eq | 90.1%         | 32.424s |
| MBM Plural              | 8 465 kgCO <sub>2</sub> eq | 90.6%         | 46.248s |
| Greedy Algorithm        | 9 320 kgCO <sub>2</sub> eq | 89.0%         | 18.096s |

The design tool is runned with 3 algorithms, namely: Greedy Algorithm Plural, MBM Plural, and Greedy Algorithm. The Greedy Algorithm Plural yields the lowest score, as shown in the table. The substitutions by this algorithm are completed in 32.424 seconds.
